The timetable of the 170th ISIJ Meeting (September 16-18, 2015 at Kyushu University, Ito Campus)

		(September 16	6-18, 2015 at Kyushu	University, Ito Campus	s)	
	· · · · · · · · · · · · · · · · · · ·	6 (Wed)	·	7 (Thu)	·	18 (Fri)
	AM	PM	AM	PM	AM	PM
Session Room 1 Center Zone 2 3rd Fl. 2303			Kyushu a	e iron and related industries in rea Japan)[2,000yen]	Interdisciplinary study (10:30–15:00	
Session Room 2 Center Zone 2 2nd Fl. 2203	the promotion of lime	ogy and fundamental research for e dissolution into slag 10:40-16:05)	Solidification and structure control 1 • 2 [34–40] (9:00–11:30)	Advances in understanding and controlling of segregation behavior during solidification (13:00–16:50)[Charge-free]	Fundamentals and applications of refining reaction 1·2 [95-100] (9:40-11:50)	Fundamentals and applications of refining reaction 3 [101–105] (13:00–14:40)
Session Room 3 Center Zone 2 2nd Fl. 2204	Fundamental of reduction/ Fundamental of reduction and carburization [1-8] (9:00-11:50)	Approaches to control phenomena in cohesive zone of blast furnace under low coke rate operation [D1-D8](13:00-17:00)	Blast furnace 1·2·3 [41–48] (9:00–12:00)	Young engineer session of ironmaking 1·2·3 [49-58] (13:00-16:40)	Agglomeration/Young engineer session of coke-making [106-113] (9:00-11:50)	Sintering 1•2 [114–119] (13:00–15:10)
Session Room 4 Center Zone 2 2nd Fl. 2207	Slag · Dust treatment [9-13] (10:00-11:40)	Properties of liquid materials/ Transport phenomena [14-20] (13:00-15:30)	CO ₂ reduction Slag treatment/Physical properties, structure, and thermodynamics of high-temperature melts 1 [59-66] (9:00-11:50)	Physical properties, structure, and thermodynamics of high-temperature melts 2·3 [67-74] (13:00-15:50)	Continuous casting• Solidification/ Conventional continuous casting•Property of cast metals [120-128] (9:00-12:10)	
Session Room 5 Center Zone 2 2nd Fl. 2208	Electromagnetic processing of materials [21-24] (10:20-11:40)	Novel processing/Introduction of research topics in novel processing forum 1 • 2 [25-33] (13:00-16:20)	Thermodynamics 1 • 2 [75-82] (9:00-11:50)	Refractories/Hot metal treatment Electric furnace/Secondary refining Inclusion 1 · 2 [83-94] (13:00-17:30)	Reflecting the social value of TETSU (9:30-11:30)[Charge-free]	
Session Room 6 Shiiki Hall 3rd Fl. Lecture Theater 1	Approaches to sustainable iron and steelmaking system with materials recycling 1 • 2 [129-134] (9:20-11:30)	Cultural heritage 1·2 [135–141] (13:00–15:30)	Bio-recycling & (9:35-14:40		Recycle/Clean coal technology [142-149] (9:00-11:50)	
Session Room 7 Shiiki Hall 3rd Fl. Lecture Theater 5	Instrumentation [150-154] (10:00-11:40)	Control/System [155-162] (13:00-15:50)	Crystal structure analysis [377-381] (10:00-11:40)	Elemental analysis [382-386] (13:00-14:40)	Advanced monitoring methods for iron and steel manufacturing processes [Int.21-27](9:00-12:20)	
Session Room 8 Shiiki Hall 3rd Fl. Lecture Theater 2	Basic and applied tribological studies on rolling processes 1•2 [163–168] (9:50–12:00)	Influence of surface oxide scale in working processes (13:00–17:10)[Charge-free]	Data management and modelling for the rolling control technology [D9-D13](9:00-12:00)	To solve problems of hot rolling rolls [D14-D20](13:00-15:50)	Cooling and oxidation scale [189-193] (10:20-12:00)	Rolling and levelling [194-197] (13:00-14:20)
Session Room 9 Shiiki Hall 3rd Fl. Lecture Theater 4		Joining 1·2 [169-174] (13:00-15:10)	Improvement of efficiency of welding and joining process [175–179] (10:00–11:40)	Advances in processing of powders and powder metallurgy 1 • 2 [180–188] (13:30–16:40)	Cutting and tribology/ Fracture characteristics and residual stress [198-204] (9:30-12:00)	
Session Room 10 Center Zone 2 2nd Fl. 2201	characterization a	sign assisted by advanced nd modelling Part I [Charge-free]	characterization a	sign assisted by advanced nd modelling Part II Charge-free]	Stabilities and material properties of austenite phase [D27-D35](9:00-14:40)	
Session Room 11 Center Zone 2 2nd Fl. 2202	prevent hydroge	-passive surface on steels to en embrittlement (9:15-16:55)		Analysis of factors which promote biological steel corrosion [D21-D26](13:00-16:50)	Evaluation and characterization [D36-D43](of fouling on steel or slag surface 10:00–15:00)
Session Room 12 Center Zone 2 2nd Fl. 2209	Cold rolled strip steels [205-209] (10:20-12:00)	Electrical steels [210-213] (13:00-14:20)	Structural steel 1 • 2 [263-269] (9:20-11:50)	Stainless steels 1·2·3 [270-279] (13:00-16:40)	Deformation structure [319-323] (9:50-11:30)	Recrystallization • texture/ Microstructure control of austenite [324-331] (13:00-15:50)
Session Room 13 Center Zone 2 2nd Fl. 2210	Phase diagram/Diffusional transformation [214-220] (9:30-12:00)	Medium manganese steels/Bainite [221–227] (13:30–16:00)	Aging precipitation [280–284] (9:50–11:30)	Martensitic transformation 1 • 2 [285–294] (13:30–17:00)	Hot-dip coating 1 · 2 [332-339] (9:10-12:00)	Chemical property [340-342] (13:00-14:00)
Session Room 14 Center Zone 2 2nd Fl. 2211	Mechanical properties/ Formability [228-235] (9:10-12:00)	Strength, deformation properties 1·2·3 [236–246] (13:00–17:00)	Austenitic heat resisting steel/Ferritic heat resisting steel 1 [295-301] (9:20-11:50)	Ferritic heat resisting steel 2·3 [302-310] (13:00-16:10)	Ni based alloy 1·2 [343-351] (9:00-12:10)	Strength, deformation propertie 4-5 [352-360] (13:00-16:10)
Session Room 15 Center Zone 2 3rd Fl. 2304	Hydrogen embrittlement 1 • 2 [247–252] (9:00–11:10)	Fatigue 1 • 2/Surface treatment [253-262] (13:00-16:40)	Fracture 1•2 [311-318] (9:10-12:00)	Degradation and life-span of infrastructures (13:00-17:00)[1,000yen]	Hydrogen embrittlement 3 • 4 [361–368] (9:00–11:50)	Hydrogen embrittlement 5·6 [369-376] (13:00-15:50)
Session Room 16 Center Zone 2 4th Fl. 2403		Micromechanisms of brittle fracture in bainitic steels and their modeling (13:00–17:00)[Charge-free]	embritt	es and evaluation of hydrogen tlement))[2,000yen]	Light elements in iron and (9:00–15:00	steel – unsolved problems [1,000yen]
Session Room 17 Center Zone 2 4th Fl. 2404			Titanium and titaniu	joint session um alloys1·2·3·4·5 9:00-17:00)	ISIJ and JIM joint session Titanium and titanium alloys6 • 7 [J20-J28](9:00-12:10)	
JIM-Session Room B Center Zone 1 3rd Fl. 1303			-		ISIJ and JIM joint session Ultrafine grained materials- fundamental aspects for ultrafine grained structures-1·2 [J29-J35] (9:30-12:00)	
		nquet tel Nikko Fukuoka ka-shi))[10,000yen]	(12:00-16:00	eer Party

Board Meeting:
Process Evaluation and Material Characterization Sept. 17(Thu) 14:40–15:40 Room 7

High Temperature Processes

Lecture No. Discussion Sessions Title	Speaker	Page	
Approaches to control phenomena in cohesive zone of blast furnace under low coke rate opera	ntion	· ·	
 13:10 ~ 13:35 D1 Clarification of mechanism of cohesive behavior in blast furnace with the aim of achieving low coke rate operation 	T. Orimoto		405
 13:35 ~ 14:00 D2 Investigation of primary slag melting of sinters in a blast furace based on microstructure observations and phase diagrams 	M. Hayashi		407
14:00 ~ 14:25 D3 Influence of thermodynamic property of burden on position of the cohesive zone in blast furnace	S. Ueda		411
14:25 ~ 14:50 D4 Physical properties of melts at cohesive and dripping zones of blast furnace	N. Saito		413
 15:00 ~ 15:25 D5 Evaluation of softening behavior of slag particle bed by new cohesive zone simulator with rapid heating and rapid cooling conditions 	K. Ohno		417
15:25 ~ 15:50 D6 Role and expectation of mathematical simulation to visualize phenomena in blast furnace	M. Sato		420
15:50 ~ 16:15 D7 Microscopic flow analysis in cohesive zone of blast furnace	T. Kon		424
16:15 ~ 16:40 D8 ADEM simulation of particle softening behavior in blast furnace	J. Kano		426
Processing for Quality Products Lecture No.		_	
Discussion Sessions Title	Speaker	Page	
Data management and modelling for the rolling control technology			
Data management and modelling for the rolling control technology 9:05 \sim 9:35			
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique	A. Kitamura		428
9:05 ~ 9:35	A. Kitamura K. Ohara		428 432
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05			
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35	K. Ohara		432
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15	K. Ohara S. Nishino		432
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45	K. Ohara S. Nishino Y. Kadoya		432 436 440
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45 D13 Plan view pattern control for steel plates through constrained locally weighted regression model	K. Ohara S. Nishino Y. Kadoya		432 436 440
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45 D13 Plan view pattern control for steel plates through constrained locally weighted regression model To solve problems of hot rolling rolls 13:00 ~ 13:20 D14 Production of standard hot two-roll type wear simulator and evaluation of wear 13:20 ~ 13:40	K. OharaS. NishinoY. KadoyaH. ShigemoriA. Yanagida		432 436 440 444
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45 D13 Plan view pattern control for steel plates through constrained locally weighted regression model To solve problems of hot rolling rolls 13:00 ~ 13:20 D14 Production of standard hot two-roll type wear simulator and evaluation of wear 13:20 ~ 13:40 D15 Preliminary test on the evaluation method of thermal fatigue by hot forming simulator 13:40 ~ 14:00	K. OharaS. NishinoY. KadoyaH. ShigemoriA. YanagidaJ. Yanagimoto		432 436 440 444 448 449
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45 D13 Plan view pattern control for steel plates through constrained locally weighted regression model To solve problems of hot rolling rolls 13:00 ~ 13:20 D14 Production of standard hot two-roll type wear simulator and evaluation of wear 13:20 ~ 13:40 D15 Preliminary test on the evaluation method of thermal fatigue by hot forming simulator 13:40 ~ 14:00 D16 Examination of sleeve roll for hot rolling 14:00 ~ 14:20	K. Ohara S. Nishino Y. Kadoya H. Shigemori A. Yanagida J. Yanagimoto A. Segawa		432 436 440 444 448 449 450
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45 D13 Plan view pattern control for steel plates through constrained locally weighted regression model To solve problems of hot rolling rolls 13:00 ~ 13:20 D14 Production of standard hot two-roll type wear simulator and evaluation of wear 13:20 ~ 13:40 D15 Preliminary test on the evaluation method of thermal fatigue by hot forming simulator 13:40 ~ 14:00 D16 Examination of sleeve roll for hot rolling 14:00 ~ 14:20 D17 Generating method of the oxide scale in hot rolling 14:30 ~ 14:50	K. Ohara S. Nishino Y. Kadoya H. Shigemori A. Yanagida J. Yanagimoto A. Segawa S. Fujisaki		432 436 440 444 448 449 450 451
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45 D13 Plan view pattern control for steel plates through constrained locally weighted regression model To solve problems of hot rolling rolls 13:00 ~ 13:20 D14 Production of standard hot two-roll type wear simulator and evaluation of wear 13:20 ~ 13:40 D15 Preliminary test on the evaluation method of thermal fatigue by hot forming simulator 13:40 ~ 14:00 D16 Examination of sleeve roll for hot rolling 14:00 ~ 14:20 D17 Generating method of the oxide scale in hot rolling	K. Ohara S. Nishino Y. Kadoya H. Shigemori A. Yanagida J. Yanagimoto A. Segawa		432 436 440 444 448 449 450
9:05 ~ 9:35 D9 Progress of data science based modeling and rolling technique 9:35 ~ 10:05 D10 Rolling process improvement based on data 10:05 ~ 10:35 D11 Development of the rolling load model by genetic programming based on a large quantity of data 10:45 ~ 11:15 D12 Adaptation of model prediction error of process control by local regression modeling 11:15 ~ 11:45 D13 Plan view pattern control for steel plates through constrained locally weighted regression model To solve problems of hot rolling rolls 13:00 ~ 13:20 D14 Production of standard hot two-roll type wear simulator and evaluation of wear 13:20 ~ 13:40 D15 Preliminary test on the evaluation method of thermal fatigue by hot forming simulator 13:40 ~ 14:00 D16 Examination of sleeve roll for hot rolling 14:00 ~ 14:20 D17 Generating method of the oxide scale in hot rolling 14:30 ~ 14:50 D18 Finite element analysis on wear behavior of hot roll material by hot rolling wear simulator	K. Ohara S. Nishino Y. Kadoya H. Shigemori A. Yanagida J. Yanagimoto A. Segawa S. Fujisaki		432 436 440 444 448 449 450 451

Microstructure and Properties of Materials

Natise Cattors which promote biological steel corrosion	Lecture No. Discussion Sessions	Title	Speaker	Page	
1234	Analysis of factors which	ch promote biological steel corrosion			
1222 SISJ Research Promotion Grant) Biogas production from metal waste by microorganisms S. Wakai 7.0 7.		ty of copper-alloyed stainless steel contaminated with hydrophobic substance.	K. Hirayama		458
15.00		notion Grant) Biogas production from metal waste by microorganisms	S. Wakai		462
15.21 15.22 15.23 15.25 15.23 15.2		alkalization on crude oil souring	Y. Tanji		465
Biomineralization via microbiologically influenced corrosion induced by pseudomonas acruginosa biofilm H. Ikegai N. 18	D24 (ISIJ Research Pror		Y. Miyano		467
Name	D25 Biomineralization v	ria microbiologically influenced corrosion induced by pseudomonas aeruginosa	H. Ikegai		468
9:00 ~ 9:30 D27 Stabilization mechanism of austenite by grain refinement D28 Stabilization effect of hydrostatic pressure generated via martensitic transformation on untransformed austenite defer of hydrostatic pressure generated via martensitic transformation on untransformed austenite deformation induced martensitic transformation of retained austenite in ferrite matrix of low aloy TRIP steel D29 Stability and deformation induced martensitic transformation behavior of retained austenite in ferrite matrix of low aloy TRIP steel D30 Micromechanical behavior of transformation-induced plasticity-assisted steel monitoring by in-situ neutron diffraction 11:10 ~ 11:40 D31 The effects of strain rate on tensile properties of ultra high-strength low alloy TRIP-aided steels T1:40 ~ 12:10 D32 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel T3:40 ~ 13:40 D33 TRIP and TWIP effects on tensile deformation behavior in a SUS316L steel T3:40 ~ 13:40 D34 Cause of serrated flow associated with deformation in austenite T4:10 ~ 14:40 D35 Fatigue property under hydrogen atmosphere in austenitic steels with different phase stability T6:10:30 ~ 10:30 D35 Fatigue property under hydrogen atmosphere in austenitic steels with different phase stability T7:10:30 ~ 10:30 D36 Analyses of biofilm formed on various metal substrates by FT-IR and Raman spectroscopy T7:10:30 ~ 10:35 D37 The effect of inner surface of cooling water pipe on biofilm formation on steels T1:30 ~ 11:55		of adhesion force of biofilm on various substrate	N. Hirai		471
D27 Stabilization mechanism of austenite by grain refinement 9.30 ~ 10:00 208 Stabilization effect of hydrostatic pressure generated via martensitic transformation on untransformed austenite 209 Stabilization effect of hydrostatic pressure generated via martensitic transformation on untransformed austenite 200 ~ 10:30 200 ~ 10:30 201 Stability and deformation induced martensitic transformation behavior of retained austenite in ferrite matrix of low alloy TRIP steel 301 N. Koga 302 * 476 303 Micromechanical behavior of transformation-induced plasticity-assisted steel monitoring by in-situ neutron diffraction 303 Micromechanical behavior of transformation-induced plasticity-assisted steel monitoring by in-situ neutron diffraction 304 Neoroba 7 1.100 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensities sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensities sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensities sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensities sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensities sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensities sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensities sheet steel 305 Formabilities of si-al ultrahigh-strength TRIP-aided martensit		properties of austenite phase			
D28 Stabilization effect of hydrostatic pressure generated via martensitic transformation on untransformed austenite N. Nakada N.	D27 Stabilization mecha	nism of austenite by grain refinement	T. Tsuchiyama		473
Stability and deformation induced martensitic transformation behavior of retained austenite in ferrite matrix of low alloy TRIP steel N. Koga	D28 Stabilization effect		N. Nakada		475
D30 Micromechanical behavior of transformation-induced plasticity-assisted steel monitoring by in-situ neutron diffraction 11:10 ~ 11:40 D31 The effects of strain rate on tensile properties of ultra high-strength low alloy TRIP-aided steels T. Hojo T. H	D29 Stability and deform		N. Koga		476
11:10 ~ 11:40 D31 The effects of strain rate on tensile properties of ultra high-strength low alloy TRIP-aided steels 11:40 ~ 12:10 D32 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 13:10 ~ 13:40 D33 TRIP and TWIP effects on tensile deformation behavior in a SUS316L steel 13:40 ~ 14:10 D34 Cause of serrated flow associated with deformation in austenite M. Koyama	D30 Micromechanical b		S. Morooka		478
D32 Formabilities of si-al ultrahigh-strength TRIP-aided martensitic sheet steel 13:10 ~ 13:40 D33 TRIP and TWIP effects on tensile deformation behavior in a SUS316L steel 13:40 ~ 14:10 D34 Cause of serrated flow associated with deformation in austenite M. Koyama M. Ko	11:10 ~ 11:40		Т. Нојо		482
13:40 ~ 14:10 13:40 ~ 14:10 13:40 ~ 14:40 13:5 Fatigue property under hydrogen atmosphere in austenitic steels with different phase stability Process Evaluation and Material Characterization Lecture No. Discussion Sessions Title Speaker Page Evaluation and characterization of fouling on steel or slag surface 10:05 ~ 10:30 10:30 ~ 10:55 D37 The effect of inner surface of cooling water pipe on biofilm formation on steels 11:05 ~ 11:30 D38 Inhibition effect of plasma treated oxidation on biofilm formation on steels 11:30 ~ 11:55		al ultrahigh-strength TRIP-aided martensitic sheet steel	J. Kobayashi		484
14:10 ~ 14:40 D35 Fatigue property under hydrogen atmosphere in austenitic steels with different phase stability Process Evaluation and Material Characterization Lecture No. Discussion Sessions Title Speaker Page Evaluation and characterization of fouling on steel or slag surface 10:05 ~ 10:30 D36 Analyses of biofilm formed on various metal substrates by FT-IR and Raman spectroscopy A. International Organized Sessions

Development of process technology and fundamental research for the promotion of lime dissolution into $10:40 \sim 10:45$	slag	
Opening Address Y. Kobayashi [Tokyo Inst. Tech.]		
10:45-16:00 Chairpersons: N. Saito [Kyushu Univ.]、H. Todoroki [Nippon Yakin Kogyo]、Y. Kobayashi 10:45 ~ 11:10	[Tokyo Inst. ⁻	Tech.]
Int1 (Invited Lecture) Observations on modelling of de-phosphorisation in oxygen steelmaking		
Swinburne Univ. of Technology G. Brooks · B. Rout · A. Rhamdhani · Z. Li		509
11:10 ~ 11:30 Int2 Thermochemistry of heterogeneous CaO-SiO ₂ -P ₂ O ₅ -Fe _x O dephosphorization slag		
Kyoto Univ. OK. Miwa · M. Hasegawa		513
11:30 ~ 11:50Int3 Effect of additives (alumina, magnesia or calcium fluoride) on dissolution rate of solid CaO into calcium silicate based slags		
Nippon Yakin Kogyo \bigcirc F. Kirihara, Kyushu Univ. K. Nakasima · N. Saito, Tohoku Univ. S. Sukenaga		514
13:15 ~ 13:35 Int4 Preparation and microstructure characterization of high active lime for steelmaking		
North China Univ. of Science and Technology OS. Hao · W. Jiang · Y. Zhang, Northeastern Univ. H. Hao		516
 13:35 ~ 13:55 Int5 (ISIJ Research Promotion Grant) Effect of CaCO₃ core existed in quicklime on the dissolution of quicklime into molten slag 		
Tohoku Univ. ON. Maruoka · H. Nogami		520
13:55 ~ 14:15		
Int6 Model experiment of solid dissolution behavior under ultrasound irradiation		
Nagoya Inst. of Tech. OK. Okumura		522
14:15 ~ 14:35 Int7 Determination of thermal conductivity of dicalcium-silicate based solid solutions		
Tokyo Inst. of Tech. ○Y. Kobayashi · Y. Tang · S. Takahashi · T. Sadamoto · R. Endo · M. Susa		526
14:55 ~ 15:20Int8 (Invited Lecture) A Kinetic Process Simulation Model for Basic Oxygen Furnace (BOF): Importance of slag chemistry for BOF operation		
McGill Univ. OIn-Ho JUNG · Marie-Aline Van Ende		527
15:20 ~ 15:40 Int9 Rheological behavior and empirical model of simulated foaming slag		
Kyushu Univ. ON. Saito, Tohoku Univ. S. Sukenaga, Kyushu Univ. K. Nakashima		531
15:40 \sim 16:00 Int10 Influence of P_2O_5 on dissolution behavior of lime into molten slag		
NSSMC OS. Kakimoto · A. Kiyose · R. Murao		532
16:00 ~ 16:05 Closing remark N. Saito [Kyushu Univ.]		
Recent progress of hydrogen-passive surface on steels to prevent hydrogen embrittlement $9:15 \sim 9:20$		
Opening Address M. Sakairi [Hokkaido Univ.]		
9:20-16:50 Chairpersons: D. Mizuno [JFE steel、M. Sakairi [Hokkaido Univ.]、T. Haruna [Kansai Univ K. Fushimi [Hokkaido Univ.]、I. Muto [Tohoku Univ.]、H. Katayama [National Institute for		ience]
9:20 ~ 10:10 Int11 (Invited Lecture) Characterization of hydrogen-metal interactions in engineering alloys: challenges and opportunities.		
Univ. of Virginia OJ. Scully	• • •	533
10:20 ~ 11:10 Int12 (Invited Lecture) Negative and positive effects of hydrogen on tensile behavior in high-mn austenitic steels		50.4
Kyushu Univ. OK. Tsuzaki · M. Koyama		534
11:20 ~ 11:45 Int13 Behavior of hydrogen absorption to iron promoted by additional elements		
Kansai Univ. OT. Haruna · Y. Nii		525
Kansai Only. O1. Matuna * 1. Ivii	·	535

13:10 ~ 14:00		
Int14 (Invited Lecture) New experimental approaches to the static and dynamic determination of hydrogen in steel Johannes Kepler Univ. Linz OA. Hassel		527
14:10 ~ 14:35		537
Int15 A microelectrochemical approach for detecting hydrogen permeation of steel		
Tohoku Univ. ○I. Muto·Y. Sugawara·N. Hara		538
14:35 ~ 15:00 Int16 Evaluation of hydrogen permeation by surface potential measurement		
NIMS OH. Katayama		540
15:10 ~ 15:35 Int17 In-situ potential measurements studying the depassivation/repassivation mechanisms of chromium work rolls durin	g cold-rolling	
CEST Competence Centre for Electrochemical Surface Technology G. Schimo, Christian Doppler Laboratory for Combinatorial Oxide Chemistry A. Hassel, Max Planck Institute for Iron Research S. Merzlikin, voestalpine Stahl GmbH D. Paesold		541
15:35 ~ 16:00 Int18 Hydrodynamic perturbation for local detection of hydrogen permeation into steel sheet		
Hokkaido Univ. OK. Fushimi · M. Jin · Y. Yamamoto		545
16:00 ~ 16:25		
Int19 Hydrogen permeation current responses of iron to potential modulation in an electrochemical hydrogen permeation	cell	
Tokyo Inst. of Tech. ○E. Tada · A. Nishikata		546
16:25 ~ 16:50		
Int20 Hydrogen permeation behavior of steels with formed scratch during wet and dry corrosion		£ 40
Hokkaido Univ. OM. Sakairi · K. Igarashi		548
16:50 ~ 16:55 Closing remark M. Kimura [KJFE Steel]		
Advanced monitoring methods for iron and steel manufacturing processes 9:00 ~ 9:10		
Opening Y. Deguchi [Tokushima Univ.]		
9:10-12:20 Chairpersons: R. Yoshihie [Nagoya Univ.]、S. Kahiwakura [Tohoku Univ.] 9:10 ~ 9:40		
Int21 (Invited Lecture) Quantitative analysis of vanadium, titanium and phosphorus elements in steel by laser-induced breakdown spectroscopy		
Wuhan National Laboratory for Optoelectronics Huazhong Univ. of Science and Technology OX. Zeng		549
9:40 ~ 10:00 Int22 Temperature effect on quantitative elemental detection of laser induced breakdown spectroscopy		
Tokushima Univ. OR. Liu · Y. Deguchi		551
10:00 ~ 10:20 Int23 (ISIJ Research Promotion Grant) The trial production of steel-scrap sorter with the aid of laser-induced breakdown	spectroscopy	
Tohoku Univ. OS. Kashiwakura · K. Wagatsuma		555
10:40 ~ 11:10 Int24 (Invited Lecture) An innovative measurement system for iron-making processes by integrating the laser induced breakdown spectroscopy (LIBS) with the 3D profile measurement system		
Department of Mechanical Engineering, National Taiwan Univ. of Science and Technology OF. Shiou		557
11:10 ~ 11:40 Int25 (Invited Lecture) Application of laser-induced breakdown spectroscopy to real-time elemental detection of process monitorings		
Xi' an Jiaotong Univ. OZ. Wang		558
11:40 ~ 12:00 Int26 LIBS measurement of gaseous sb in simulated flue gas		
Nagoya Univ. OR. Yoshiie · R. Ishikawa · Y. Ueki · I. Naruse		561
12:00 ~ 12:20		
Int27 Quantitative elemental detection of LIBS for iron and steel making processes		
Tokushima Univ. OY. Deguchi		564

High Temperature Processes

Lecture No. Plenary Session	Title	Speaker	Page	
Fundamental of reduction				
1 Effect of reducing gas	composition on the reducibility of calcium ferrite	S. Mataoka		566
2 Reduction behavior of	multicomponent calcium ferrite with CO-CO ₂ -H ₂ gas mixture	S. Takeda		567
3 Gasification behavior of	of graphite with CO ₂ -H ₂ gas mixtures	R. Kubo		568
4 Effect of CO-H ₂ -N ₂ gas rising temperture	s mixture and Al ₂ O ₃ , MgO contents on reduction rate of artificial iron ore under	S. Fujiwara		569
Fundamental of reduction	and carburization			
5 Morphology observation microwave heating furnitude	on of reduced self-reducing dust pellets heated by electric resistance furnace and nace.	M. Doji		570
6 In-situ XRD observation	on of carbothermic reduction of hematite powders using microwaves	H. Tanaka		571
7 Effect of sulfur on redu	action and carburization of carbonaceous material and iron ore composite	K. Matsuda		572
8 Effect of sulphur on ca	rburization and melting behavior of iron	T. Murakami		573
Slag · Dust treatment				
· ·	tion on precipitated phase in steel making slag	H. Tate		574
10 Reduction of titanium l	bearing slag to titanium silicide	Z. Chen		575
11 Recovery of zinc and le	ead from electric arc furnace dust by using selective chlorination reaction	H. Kitao		576
12 Influence of temperature Pb contained in EAF d	re on the selective chlorination and evaporation reaction of Zn and ust	G. Sun		577
13 Phase relation during re	eduction of CaO treated EAF dust	T. Kanamori		578
Properties of liquid mater	ials			
-	nthalpy on temperature dependence of pure fluorides viscosities	N. Takahira		579
	position on behavior of slag foaming	M. Ohta		580
16 Effect of alkali oxide (l	R ₂ O) additions to the absorption ability of tundish fluxes	I. Sohn		581
Transport phenomena				
17 (ISIJ Research Promoti	ion Grant) Observation of bubble behavior at the ionic solution/liquid metal			
interface with electroca		E. Takeuchi		582
	emulsification at the interface of the ionic solution and the liquid metal	Y. Hiyama		583
•	tal - slag interfacial flow due to the gas bubble rising	R. Nashimoto		584
20 Construction of three-d	limensional simulation program for the analysis of the particle injection	M. Nakano		585
Electromagnetic processin	g of materials			
21 Electromagnetic sensor	r just below cc mold by using magnetic transforamtion of steel	H. Harada		586
22 Effect of a static magne	etic field on molten tin flow in packed bed filled with copper ball	H. Ishii		587
23 Effect of vibrating elec vicinity of anode	tromagnetic force on concentration boundary layer formed in the	T. Yokota		588
24 Effect of applied magn	etic field to aluminum anodization	S. Prabowo		589
Novel processing				
25 Influence of distance be by sacrificial-core metl	etween sacrificial cores on formation of microchannel lining layer hod	H. Ichimura		590
26 Effect of lining layer comicrochannel lining	omposition on the structure of anodic oxide films on the Ti-Al alloy	T. Yamamori		591
27 Influence of the atmosp	phere on reaction of the B ₄ C-SUS304-Zircaloy system	R. Sasaki		592
Introduction of research to	opics in novel processing forum 1			
	neated metal particles for applications of their sintering	K. Kashimura		593
•	ion Grant) Some topics on microwave processing of materials	N. Yoshikawa		594
	m of dissolution rate of solid with ultrasound vibration	K. Okumura		595

Introduction of acceptab tonics in nevel processing forum 2			
Introduction of research topics in novel processing forum 2 31 Report of the activity of In-Process technology research group	T. Kozuka		596
32 Introduction to the study group of containerless materials processing	J. Fukushima		597
33 Technology of separation TiO2 from molten titanium-bearing slag by super gravity	Z. Guo		598
33 Technology of separation 1102 from motion thannum-bearing stag by super gravity	Z. Guo		370
Solidification and structure control 1			
34 Estimation of initiation mechanism of hot tear by fractography	Y. Yoshida		599
35 Crystallographc analysis of discs of Al-6 wt% Si alloy	H. Morishita		600
36 (ISIJ Research Promotion Grant) Large-scale MD simulation of nucleation and solidification from undercooled melt	Y. Shibuta		601
37 (ISIJ Research Promotion Grant) Large-scale 3D phase-field simulations of dendrite competitive growth in binary alloy bicrystal	T. Takaki		602
Solidification and structure control 2			
38 In situ observation of solidification in Fe-Cr-Ni alloys	T. Nishimura		603
39 Driving force for the interface migration in the δ/γ massive-like transformation	K. Sugimura		604
40 Formation of a tellurium rich layer around MnS inclusions in the Mn-Fe-Te-S system	G. Tripathi		605
	•		
Blast furnace 1	77. 77.		(0)
41 Investigation of physical parameters in DEM for stress analysis in packed bed.	K. Komori	• • •	606
42 Development of simulation of coke breakage caused by load in blast furnace	A. Yoshino	• • •	607
Blast furnace 2			
43 Effect of mixed charge graphite ball on pressure drop of the slag grain packed bed.	S. Hori		608
44 (ISIJ Research Promotion Grant) Particle based direct numerical modeling of solid-gas-liquid 3-phases flow	S. Natsui		609
45 Influence of the void shape on static holdup	H. Takai		610
Blast furnace 3			
46 Flow behavior of injected plastic particles in a blast furnace	R. Murai		611
	G. Yada		612
47 Influence for combustibility of pulverized coal by adding mixed gas including hydrogen	K. Nishioka		613
48 Development of mathematical blast furnace model for experimental blast furnace	K. MISHIOKa	• • •	013
Young engineer session of ironmaking 1			
49 Operation of tobata no.3 sintering machine after improvement	Y. Ohashi		614
50 Model analysis of high combustibility carbon in sintering	Y. Narita		615
51 Development of lump ore screening technology	S. Enoeda		616
52 Development of lump ore screening technology	A. Mishima		617
Young engineer session of ironmaking 2			
53 Effect of charging method on discharge behavior of small coke from center feed bell-less top	Y. Kashihara		618
54 Development of charging technique for mixing coke in ore layer at keihin2 BF	H. Atsumi		619
55 Control technique of coke rate in shaft furnace by controlling coke reactivity	Y. Iwai		620
	1.1,,,,,,		020
Young engineer session of ironmaking 3			
56 The development of techniques of estimating furnace condition according to the tuyere camera image analysis	D. Ijichi		621
57 Replace and start-up of new 3rd hot stove for kokura No.2 blast furnace	T. Kojima		622
58 Efforts of kiln chunk quantification in Kakogawa No.1 pellet plant.	K. Yamada		623
CO ₂ reduction • Slag treatment			
59 Co gas production by CO ₂ gas decomposition in molten CaCl ₂ -CaO	F. Matsuura		624
60 Pilot plant test results of heat recovery system from steelmaking slag. (COURSE50 development of			
heat recovery system from steelmaking slag-6) 61 Alkaline elution behavior of steelmaking slag with actual thickness in marine construction measured	S. Ozawa		625
by free-flow water tank experiments using sea water	K. Takahashi		626
62 Separation and recovery of Mn and P from dephosphorization slag with electrical disintegration	H. Kubo		627

Physical properties, structure, and thermodynamics of high-temperature	melts 1		
63 Density measurement of Ni-Al melts by electromagnetic levitation technique i			628
64 Surface tension measurements of liquid SUS316	H. Higashi		629
