The 178th ISIJ Meeting

Date

September 11 to 13, 2019

Venue

Okayama University, Tsushima Campus 2-1-1 Tsushima-naka, Kita-ku, Okayama 700-8530

<u>Access</u> (Source: Homepage of Okayama University)

1.Access from Okayama Airport:

1)Limousine Bus:

Limousine bus services are available from the airport to Okayama station (JPY760).

2)Taxi:

It costs approximately JPY5,000 from the airport to the Tsushima Campus.

2. Access from Okayama Station:

1)Taxi:

We recommend that you take a taxi from the station. There are several taxis waiting at both the east and west exits. The taxi fare to the Tsushima Campus is approximately JPY1,500. It is about 7 minutes from Okayama Station.

2)Bus:

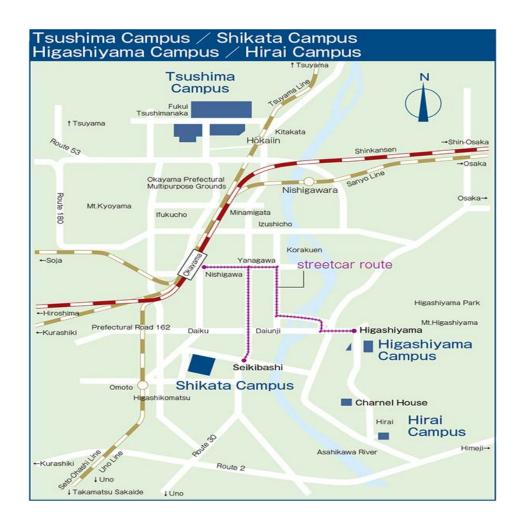

There are frequent bus services from Okayama station. The bus fare is JPY 200. At JR Okayama Station West Exit Bus Terminal, take Okaden Bus for "Okayama rika daigaku" and get off at "Okadai nishimon".

3)Foot:

It is about 30 minutes from the Okayama station west exit.

For more information, please see the following website.

http://www.okayama-u.ac.jp/eng/access_maps/index.html

Banquet

1.Date: September 11, 2019 18:30~20:30

2. Vanue: Purity MAKIBI, Peacock room (2nd Fl.)

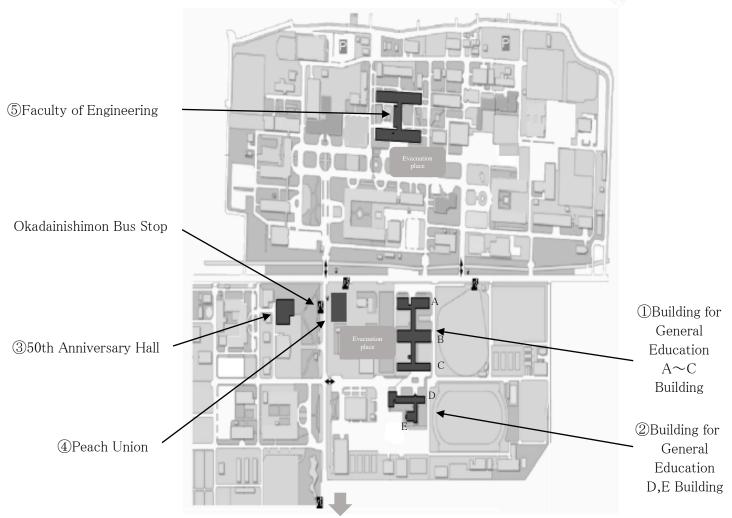

2-6-41 Shimoishii, Kita-ku, Okayama 700-0907

http://www.makibi.jp/

3.Fee: 8,000yen

Campus map

Towards Okayama Daigaku Suji Bus Stop

①A~C Building for General Education: ISIJ Reception Desk(2nd Fl.),

Session Room 1~14, 17(1st Fl.~4th Fl.), Secretariat (2nd Fl.)

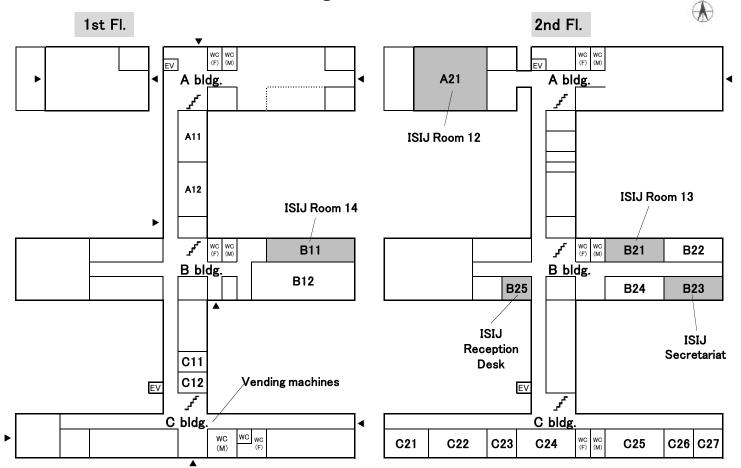

②D,E Building for General Education:
 ③50th Anniversary Hall:
 Session Room 15, 16(1st Fl.)
 Poster Session for Students(2nd Fl.)

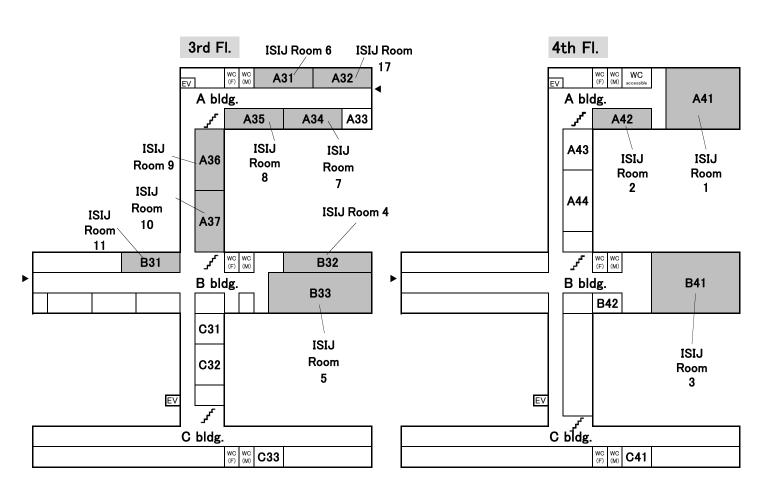

④Peach Union:
ISIJ Beer Party (3rd Fl.), Cafeteria(2nd Fl.~3rd Fl.), Shop(1st Fl.)

⑤ Faculty of Engineering Building No.1: The Japan Institute of Metals and Material's Session Room

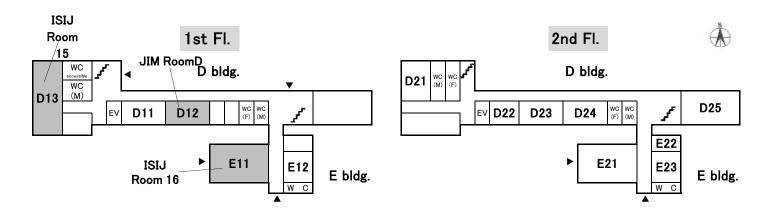

Okayama University is a completely non-smoking environment.

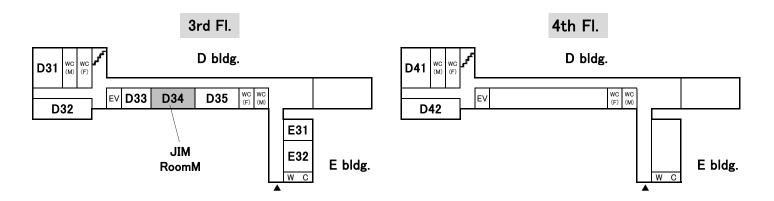

A~C Building for General Education

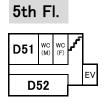

D,E Building for General Education

The timetable the 178th ISIJ Meeting (September 11–13, 2019 at Okayama University, Tsushima Campus)

	Sept. 11	(Wed.)	Sept. 13	2 (Thu.)	Sept. 1	3 (Fri.)
Session Room	AM	PM	AM	PM	AM	PM
Session Room 1 Bldg. for General Education 4th fl. A41	Contribution of steelr the sustainable de [Int1-Int11	evelopment in Asia] (9:30-15:50)	Thermodynamics/ Transport phenomena [23-30] (9:00-11:50)	Converter and electric furnace/Secondary refining [31-38] (13:00-15:50)	Control of solidified structure of steelmaking slag for suppression of elution of alkali (9:00-11:50) [Charge-free]	
Session Room 2 Bldg. for General Education 4th fl. A42	Novel processing/Electromagnetic processing of materials [1-7] (9:30-12:00)	Analysis and quantification of segregation and defect during solidification (13:00-16:25) [Charge-free]	Advanced utilization of by- materials/Eco-process and iron making [99-107] (9:00-12:10)			
Session Room 3 Bldg. for General Education 4th fl. B41	Cohesive zone in blast furnace 1-2 [8-14] (9:20-11:50)	Current state and challenges for future advancement of instrumentation technology for ironmaking process (13:00-17:20) [Charge-free]	Reactions and operation estimation of blast furnace/ Raceway in blast furnace [39-45] (9:00-11:30)	Current situations and issues on characterization of multi-component calcium ferrite aiming for production of high-performance iron ore sinters [D1-D5] (13:00-16:10)	Young engineer session of iron making/Sintering process 1 [59-65] (9:00-11:30)	Sintering process 2/ Analysis of sinter [66-73] (13:00-15:50)
Session Room4 Bldg. for General Education 3rd fl. B32	Effective utilization of resources 1 · 2 [15-22] (9:10-12:00)	Evaluation of social value of material in the value chain (13:00-16:50) [Charge-free]	Young engineer session of coke-making 1 • 2 [46-52] (9:00-11:30)	Young engineer session of coke-making 3/Coke [53-58] (13:00-15:10)	Inclusion [74–77] (10:00–11:20)	Slag and dust treatment [78-82] (13:00-14:40)
Session Room 5 Bldg. for General Education 3rd fl. B33		Carbon dioxide Capture-Less- Utilize (CCLU) process without CO ₂ separation and recovery (13:00-17:00) [Charge-free]	Chugoku a	e iron and related industries in area Japan 000yen, Student: 1,000yen]	Solidification and structure control/Continuous casting and solidification 1 [83-91] (9:00-12:10)	Continuous casting and solidification 2·3 [92-98] (13:10-15:40)
Session Room 6 Bldg. for General Education 3rd fl. A31	Advanced abnormality diagnoses based on area sensing technologies [D6-D10] (9:20-12:00)		Instrumentation 1·2 [108-114] (9:00-11:30)	Control and system [115–118] (12:30–13:50) Human–system shared control realizing high efficient and stable rolling [D11–D15] (14:00–16:35)		-
Session Room 7 Bldg. for General Education 3rd fl. A34	Modeling of various phenomena in metal forming and its application 1-2 [119-125] (9:20-11:50)	Current research and development of width control in hot rolling [D16-D20] (13:00-16:50)	excellent hot-dip	and nano-level analysis of Zn coating layer [Charge-free]	Scale and cooling/Cooling [152-158] (9:20-11:50)	Hot rolling/ Fundamental tribological studies on manufacturing processes [159–168] (13:00–16:30)
Session Room 8 Bldg. for General Education 3rd fl. A35		Reliability evaluation of steel weld 1·2/Control technology for free cutting-13 [126-135] (13:00-16:40)	The technical session by young engineers of hot rolling 1 • 2 [136–141] (9:30–11:40)	Young engineer's latest researches on tubes and pipes II-1·2/Advances in processing of powders and powder metallurgy [142–151] (13:00–16:40)		
Session Room 9 Bldg. for General Education 3rd fl. A36	Modeling and simulation 1·2 [169-176] (9:10-12:00)	Frontier of quantum beam analysis for metallic microstructures II (13:00-16:55) [Charge-free]	Stainless steels 1 [212-215] (10:30-11:50)	Stainless steels 2·3 [216-223] (13:30-16:20)	Fatigue property/ Toughness and ductility [270-277] (9:00-11:50)	
Session Room 10 Bldg. for General Education 3rd fl. A37	Fatigue damage on surface machine struc (9:20-16:00)	tural use, 2nd	Strength and deformation behavior 1 · 2 [224-231] (9:00-11:50)	Strength and deformation behavior 3 • 4 • 5 [232-241] (13:00-16:40)	Hot-dip coating Chemical property [278-282] (10:20-12:00) [283-286] (13:00-14:20)	
Session Room 11 Bldg. for General Education 3rd fl. B31	Plate and machine structural steel [177–179] (11:00–12:00)		Electrical steel 1·2 [242-248] (9:10-11:40)	Recrystallization and grain growth 1 • 2 [249-256] (13:30-16:20)		
Session Room 12 Bldg. for General Education 2nd fl. A21	Phase transformation/ Aging and precipitation [180-186] (9:10-11:40)	Microstructure formation 1 • 2 [187–193] (13:20–15:50)	Ferritic heat resistant steel 1 • 2 [257-264] (9:00-11:50)	Austenitic heat resistant steel and heat resistant alloy [265-269] (13:30-15:10)	Inhomogenous deformation and (9:00-15:10)	mechanical properties of steels [Charge-free]
Session Room 13 Bldg. for General Education 2nd fl. B21		ISIJ and JIM joint session Titanium and its alloys 1 • 2 [J1-J10] (13:00-16:30)			ISIJ and JIM joint session Titanium and its alloys 3·4 [J11-J18](9:00-11:50)	
Session Room 14 Bldg. for General Education 1st fl. B11		ISIJ and JIM joint session Materials science of martensitic and bainitic transformations and its applications 1 [J28–J31](13:10–14:30)	ISIJ and JIM, Materials science of martensitic its application [J32–J50](:	and bainitic transformations and ns 2.3.4.5.6	ISIJ and JIM joint session Materials science of martensitic and bainitic transformations and its applications 7.8 [J51-J58](9:00-11:50)	
Session Room 15 Bldg. for General Education 1st fl. D13		High-strengthening theory in high-temperature materials II (13:00-17:10) [Charge-free]	precipitation in	es on phase transformation and Titanium alloys [Charge-free]		
Session Room 16 Bldg. for General Education 1st fl. E11	Hydrogen embrittlement 1·2 [194–199] (9:40–11:50)	Hydrogen embrittlement 3·4·5 [200–211] (13:00–17:20)	Mechanism of fracture and practica (9:00-16:50	al issues in hydrogen embrittlement 1) [2,000yen]	Hydrogen embrittlement 6•7 [287–293] (9:20–11:50)	Hydrogen embrittlement 8 [294–296] (13:00–14:00)
Session Room 17 Bldg, for General Education 3rd fl. A32			Surface and state analysis/ Crystal structure analysis [297–303] (9:10–11:40)	Fabrications of new functionalities of biofilm-covered and/or chemically treated slags and their analyses (13:00-16:25) [Charge-free]	Elemental analysis 1 [304-307] (10:30-11:50)	Board Meeting of Process Evaluation and Material Characterization (13:00-14:00) [Charge-free] Elemental analysis 2 [308-310] (14:10-15:10)
JIM Session Room D Bldg. for General Education 1st fl. D12					ISIJ and JIM joint session Ultrafine grained materials -fundamental aspects for ultrafine grained structures - 1 • 2 • 3 [J19-J27] (9:00-12:20)	
JIM Session Room M Bldg. for General Education 3rd fl. D34			ISIJ and JIM Physico-chemical properties of hi [J59-J76] (igh temperature melts 1 • 2 • 3 • 4 • 5		
	Banı (18:30–20:30 Purity MAKIBI 2n		ISIJ Be	n for Students h Anniversary Hall) ver Party nion 3rd fl.) [1,000yen]

Discussion Sessions

High Temperature Processes / Process Evaluation and Material Characterization

Lecture No.	iracterization	
Discussion Session Title	Speaker	Page
Current situations and issues on characterization of multi-component calcium ferrite aiming	for production o	f
high-performance iron ore sinters		
13:05-13:45 D1 Sintering technologies for high quality sintered ore at JFE Steel	T. Higuchi	• • • 399
13:45-14:25 D2 Reduction behavior of silico-ferrite of calcium and aluminum under blast furnace condition	T. Murakami	• • • 403
14:25-14:40 D3 withdraw		
14:40-15:20 D4 Current state of multi-component phase diagram including SFCA phase	R. Murao	• • • 405
15:20-16:00 D5 Structural study of multi-component calcium ferrite (SFCA) phase	K. Sugiyama	• • • 409
Instrumentation, Control and System Engineering		
Lecture No.	On a alve :	D
Discussion Session Title	Speaker	Page
Advanced abnormality diagnoses based on area sensing technologies 9:20-9:30		
D6 Intelligent abnormality diagnosis for steel works by using adaptive area sensing	H. Tamaki	• • • 412
9:30-10:00 D7 Remote monitoring of conveyor belt using a mirror-drive active vision	I. Ishii	• • • 413
10:00-10:30 D8 Small vibration measurement and rotating angle measurement of a conveyer belt using sampling moire camera	M. Fujigaki	• • • 415
 10:40-11:10 D9 Parameter dependent models for health diagnosis of equipments based on state, parameter and input estimation method 	T. Asai	• • • 418
11:10-11:40 D10 Unknown anomaly detection using hidden markov model and area sensing technology	I. Ono	• • • 420
Instrumentation, Control and System Engineering / Processing for Quality Lecture No.	ality Products	3
Discussion Session Title	Speaker	Page
Human-system shared control realizing high efficient and stable rolling		
14:05-14:35 D11 Theories and characteristics of tandem srip rolling	F. Fujita	• • • 424
14:35-15:05 D12 On simulator for cold tandem rolling control systems	O. Kaneko	• • • 428
15:05-15:35 D13 (Invited Lecture) Mazda's vision for cars of the future	T. Tochioka	• • • 432
15:35-16:05 D14 Taxonomy and examples of shared control	M. Itoh	• • • 436
16:05-16:35 D15 Issues and prospects of shared control for tandem cold rolling	A. Kitamura	• • • 438

Processing for Quality Products

Lecture No. Discussion Session Title	Speaker	Page
Current research and development of width control in hot rolling		
13:05-13:45 D16 Strip width control technology for hot strip mill	S. Fukushima	• • • 441
13:45-14:25 D17 The state and issues of width control for hot strip mills	M. Sano	• • • 445
14:35-15:15 D18 Evaluation for deformed profile of Slab-End due to conditions of rolling and press reduction	Y. Nakamura	• • • 449
15:15-15:55 D19 (Invited Lecture) Influence of sizing press condition on plan view pattern of sheet bar in hot strip mill	H. Goto	• • • 453
15:55-16:35 D20 Introduction of recent slab sizing press	T. Kamoshita	• • • 457

International Organized Sessions

High Temperature Processes 2019/9/11 Room1 (Bldg. for General Education 4th fl. A41)

Contribution of steelmaking technology for the sustainable development in Asia

Session Organizer: S. Kitamura [Tohoku Univ.] 9:30-9:35 Opening Remark: S. Kitamura [Tohoku Univ.] Chair: S. Ueda [Tohoku Univ.] Int.-1 (Invited Lecture) Experimental study on DRI production by both of composite carbon and gas reduction Dong-A Univ. ○Y. Kang · S. Song 458 10:00-10:25 Int.-2 New refining technologies for high-purity steel and minimization of steelmaking slag JFE OY. Nakai · N. Kikuchi · Y. Kishimoto 462 10:25-10:50 Int.-3 Solution models applied to estimate thermochemical properties of the CaO-SiO,-P₂O₅-Fe₂O dephosphorization slags at 1573K Kyoto Univ. OM. Hasegawa · K. Saito · Y. Oshima 466 Chair: N. Saito [Kyushu Univ.] 11:05-11:30 Int.-4 (Invited Lecture) Effect of natural convection on formation and melting of shell around low melting point additives in steel IIT Kanpur OA. K. Singh · A. Arya 470 11:30-11:55 Int.-5 Development of full utilization process of steelmaking slag Nippon Steel OT. Harada · M. Sakamoto · S. Kakimoto 474 Chair: M. Hayashi [Tokyo Inst. Tech.] 13:00-13:25 Int.-6 Crystallization behavior of molten slags characterized under alternative current field Kyushu Univ. ON. Saito · K. Nakashima 477 13:25-13:50 Int.-7 (Invited Lecture) Control of optimum argon shrouding practice - A water model study IIT Bombay ON. N. Viswanathan · N. B. Bharath · G. Kalaivani, JSW S.P. Jayaraj 478 Int.-8 (Invited Lecture) The role of an upper slag phase and thermal in-homogeneity in melt on grade intermixing time in a tundish at constant throughput rate IIT Kanpur OD. Mazumdar · S. Chakraborty 482 Chair: S. Kitamura [Tohoku Univ.] 14:30-14:55 Int.-9 (Invited Lecture) Key issues of molten steel initial solidification during the process of casting Central South Univ. OW. Wang · P. Lyu 486 14:55-15:20 Int.-10 (Invited Lecture) Calcium cored wire injection for stable casting: An insight into fundamentals and economics IIT Kharagpur ○G. G. Roy · B. Kumar 489 Int.-11 MnS precipitation behavior around MnO-SiO₂ inclusion in Fe-Mn-Si-O-S alloy system at the solid-liquid equilibrium temperature Tohoku Univ. OJ. Gamutan · T. Miki · T. Nagasaka 493 15:45-15:50 Closing Remark: S. Kitamura [Tohoku Univ.]

High Temperature Processes

Lecture No. Plenary Session Title	Speaker	Page
Novel processing		3.3
1 Influence of ultrasonic vibration surface roughness on droplet shape	Y. Tanaka	• • • 497
2 Improvement of the performance of quasi-zeolite particles synthesized from fly-ash	T. Kozuka	• • • 498
3 Phase separation of slag using aggregation by magnetic field	M. Nagano	• • • 499
Electromagnetic processing of materials		
4 Influence of composition on heating and flow in molten V ₂ O ₅ -Na ₂ O under electromagnetic induction	N. Yoshikawa	• • • 500
5 Effect of copper rods' position in circular pipe on liquid tin flow under magnetic field imposition	S. Iimura	• • • 501
6 Velocity estimation for concentration boundary layer thickness decrease mechanism analysis under simultaneous imposition of current and magnetic field	G. Xu	502
7 Grain refinement mechanism of solidified structure by ultrasonic vibration under condition of flow suppression	N. Tabayashi	503
Cohesive zone in blast furnace 1	M G	50.4
8 An experimental approach to the softening and melting behavior of acid pellet with low-MgO sinter	M. Sun	• • • 504
9 Deformation behavior of a packed bed of softening particles	K. Baba	• • • 505
10 Gas clogging evaluation due to ore layer softening by eulerian-lagrangian method	S. Natsui	• • • 506
11 Trickle flow analysis considering liquid iron-molten slag-coke triple line by SPH	K. Tonya	• • • 507
Cohesive zone in blast furnace 2		
12 Modeling of ash particles behaviors during reaction of cokes	K. Teshima	• • • 508
13 Relocation of molten CaO-SiO ₂ -Al ₂ O ₃ -FeO droplet on surface of reducing agent	S. Ueda	• • • 509
14 Factors affecting static hold up of molten slag in coke-packed bed	Y. Lee	• • • 510
Effective utilization of resources 1		
15 (ISIJ Research Promotion Grant) Recycling of phosphorus from steel making slag with microalgae II	Y. Hoshikawa	• • • 511
16 Long term dissolution behavior of CaO-SiO ₂ -FeO _x glassy phase - 2CaOSiO ₂ coexisting slag in paddy field environment	S. Koizumi	• • • 512
17 Effect of moisture content on briquetting formability of steel mill dust	K. Maeda	• • • 513
18 The study on re-use technology of valuable metal-containing dust for RHF	Y. Jeong	• • • 514
Effective utilization of resources 2		
19 Segregation of reduced fine iron ore in powder particle fluidized bed	K. Fujino	• • • 515
20 Reduction mechanism of carbon-iron ore composite prepared using lignite	K. Sato	• • • 516
21 Removal of gangue in low-grade iron ore by hydrothermal treatment	Y. Mochizuki	• • • 517
22 Separation of phosphorus from Mn ore by selective reduction	X. Gao	• • • 518
Thermodynamics		
23 Oxygen partial pressure and basicity dependence on the solubility of CrO _x in CaO-SiO ₂ -CrO _x		
slag at low oxygen partial pressure	C. Kato	• • • 519
24 Determination of CrO _x activity in CaO-SiO ₂ -CrO _x slag under reducing condition	Z. Li	• • • 520
25 The thermodynamic property of B in molten Si-Cu-Sn alloy	T. Mizutani	• • • 521
26 Phase relation of Fe-Mn-S and Fe-Cr-S system	Y. Lu	• • • 522
Transport phenomena		
27 (ISIJ Research Promotion Grant) In-situ observation of bubble at the molten salt / Sn interface by controlling applied potential	H. Konishi	• • • 523
28 Trial for in-situ interface observation of desulfurization reaction in molten pig iron-lime system	H. Esaka	• • • 524
29 A kinetic model of mass transfer and chemical reactions at a steel/slag interface under effect of interfacial tensions	P. Ni	• • • 525
30 Effects of top and bottom blowing conditions on spitting generation phenomena	S. Sato	• • • 526
Converter and electric furnace		
31 Computational fluid dynamics simulation on tapping operation of converter	Y. Higuchi	• • • 527
32 Nitrogen pickup during tapping of liquid steel from induction furnace to ladle	A. Okayama	• • • 528
33 Effective combined blowing technique with slag splashing	L. Yang	• • • 529
34 withdraw		

153 SISJ Research Promotion Grant) Mass transfer analysis of gas-liquid interface in a gas stirred vessel 1. Environmental, Energy and Social Engineering

Lecture No. Plenary Session Title	Speaker	Page
Advanced utilization of by-materials	•	3
99 (ISIJ Research Promotion Grant) Recovery of phosphorus from steelmaking slag	M. Uchikoshi	• • • 591
100 Optimization of the high phosphate slag fertilizer (Report of the workshop on the effective application of phosphate in the steelmaking slag 1)	T. Harada	592
101 Trial to utilize phosphate in the steelmaking slag for plant cultivation (Report of the workshop on the effective application of phosphate in the steelmaking slag 2)	J. Wasaki	593
102 Long-term alkali elution from steelmaking slag filled in an open channel into seawater	Y. Matsuda	• • • 594
103 Fertilization effect of steelmaking slag granules on growth of nori	M. Takano	• • • 595
Eco-process and iron making		
104 Fabrication of iron oxide nanoparticles via submerged photosynthesis and the morphologies under different light sources	L. Zhang	• • • 596
105 (ISIJ Research Promotion Grant) Development of low flow rate cooling technology for a mold plate of continuous casting with uni-directional porous copper	K. Yuki	• • • 597
106 Thermal and mechanical durability of aluminized iron-based heat storage materials	S. Miura	• • • 598
107 Test of direct ironmaking process in the early Kofun period	K. Nishimura	• • • 599
Instrumentation, Control and System Engineering		
Lecture No.	Chaokor	Dogo
Plenary Session Title	Speaker	Page
Instrumentation 1	II W 1.	600
108 Inline evaluation of mechanical properties of steel sheets by electro-magnetic method	H. Yamada	• • • 600
109 Statistical evaluation method for material uniformity using ultrasonic scattering	T. Morinaga	• • • 601
110 The report on the research group of pipe wall measurements using the circumferential guided waves (11) (Study on the circumferential guided waves EMAT using resonance method)	R. Murayama	• • • 602
111 Evaluation of inspection properties for inclusions in steel by X-ray CT and UT	K. Ozaki	• • • 603
Instrumentation 2		
112 High-precision temperature measurement of materials in a heating furnace	M. Muramatsu	• • • 604
113 Measurement of slag emissions using blast furnace tap hole camera	K. Kuwana	• • • 605
114 Neural network model for predicting surface defects of wire rods	I. Son	• • • 606
Control and system		
115 Crossbow correction for uniform coating weight control	C. Jee	• • • 607
116 Operation guidance on thermal control of blast furnace	Y. Hashimoto	608
117 An optimization for ore yard operation schedules using multi-start greedy algorithm	A. Kumano	609
118 Applying column generation to stack sorting problem in the slab yard	T. Kurokawa	• • • 610
Processing for Quality Products		
Lecture No. Plenary Session Title	Speaker	Page
Modeling of various phenomena in metal forming and its application 1		1 119
119 Dislocation density base modelling of flow stress during tensile testing with holding/unloading and reloading in high tensile strength steel	N. Ueshima	611
120 Prediction of ductile fracture in upset forging by an ellipsoidal void model	K. Komori	• • • 612
121 Comparative simulations of hot deformation behavior under varying thermal-mechanical conditions	Y. Liu	• • • 613
Modeling of various phenomena in metal forming and its application 2	II Nacata	(14
Evaluation of cold forge solid phase bonding strength between carbon steel and pure aluminum Experimental verification of simplified identification method of yield function using	H. Nagata	• • • 614
circumscribing polygon	S. Kodama	• • • 615
124 Analysis of draw/re-draw process using Yld91 yield function and non-associated flow rule	A. Yoshimura	• • • 616
125 Elastic-plastic FEM analysis of tension leveling with different constitutive models	H. Wang	• • • 617

Relial	bility evaluation of steel weld 1		
	Construction of microstructural diagram for steel based on crystallography	K. Tsutsui	 618
	Effect of metal vapor transport on electrode deformation during TIG welding	K. Tanaka	 619
	Numerical simulation for consumption process of tungsten electrode during TIG welding	M. Tanaka	 620
	bility evaluation of steel weld 2		
129	Evaluation of ratio of lattice defects in multi-pass welds of reduced activation ferritic/martensitic steel F82H using positron annihilation technique	H. Mori	 621
130	Solidification evolution and the cracking susceptibility in weld metal of austenitic stainless steels	K. Kadoi	 622
131	Numerical simulation of effect of microstructure on hydrogen-related cracking of duplex stainless		
	steel weld metal	Y. Mikami	 623
Contr	rol technology for free cutting-13		
132	Influence of MnS aspect ratio on machinability of free-cutting ferritic stainless steel	M. Tojo	 624
133	(ISIJ Research Promotion Grant) Effect of shot grid diffused layer generated by hot shot peening		
12.4	on surface hot shortness	A. Takemura	 625
	Cutting characteristic of Co-Cr-Mo alloy	M. Hagino	 626
135	Machinability of inconel material by ball end milling	T. Inoue	 627
The to	echnical session by young engineers of hot rolling 1		
136	The combustion control using the calorimeter	R. Shima	 628
137	Reduced of scale loss by optimization of air ratio in the reheating furnace at hot strip mill	S. Harada	 629
138	Reheating temperature reduction by the heat retention cover	T. Ushizawa	 630
The to	echnical session by young engineers of hot rolling 2		
139	Actions to improve strip passability in finishing mill	K. Nohgashira	 631
140	Inhibiting thermal elevation of finishing roll chock	T. Sasaki	 632
141	Improvement of strip thickness accuracy in hot strip	A. Okamatsu	 633
Young	g engineer's latest researches on tubes and pipes II-1		
•	Improvement of formability in rotary draw bending for high strength steel tubes	S. Tamura	 634
	FEM simulation of one-sided rubber bulging test of metal tube	K. Nakahara	 635
144	New cutting method of metal pipes with twist shearing	S. Kyuma	 636
Voun	g engineer's latest researches on tubes and pipes II-2		
,	Material modeling using multiaxial tube expansion tests and hole expansion forming simulation		
1.0	of hot-rolled steel sheet	S. Nomura	 637
146	Estimation of creep strain equation of weld metal and HAZ in Mod.9Cr-1Mo steel welded joint	T. Nakamura	 638
147	Fabrication of β titanium alloy microtubes using laser dieless drawing	T. Furushima	 639
Adva	nces in processing of powders and powder metallurgy		
	Contact fatigue properties of sintered and rolled gear applied for Ni-Mo pre-alloy steel powder	Y. Taniguchi	 640
	The relationship between dimensional accuracy and copper content variation during continuous	C	
	compaction in iron-based sintered material	S. Unami	 641
	Fabrication of micro parts by viscous flow processing of Pd metallic glassy particles	N. Yodoshi	 642
151	Effect of preheating under glass transition temperature on green density of ferrous metallic glass powders by viscous flow compaction	T. Kamogawa	 643
Scale	and cooling		
152	Analysis of factors affecting scale detachment of low carbon steels	D. Kim	 644
153	Effect of non-stoichiometry in Fe _{1-x} O layer on thermal effusivity of oxide scale	R. Endo	 645
154	Boiling heat transfer characteristics of water jet to high-speed moving plate	T. Hirao	 646
155	Development of a computational model for water spray quenching of steel	H. Funagane	 647
Cooli	ng		
	Controllability of the stopping temperature of fast cooling by hot compression testing machine	S. Ding	 648
157	Design of feedforward control system for 3-stage cooling based on simplified temperature		
	distribution model for run out table of hot strip mill	R. Saito	 649
158	The effect of boiling regime on residual stress in steel sheet after spray cooling	S. Yanagi	 650

	1 regium of the 170 lote Mooting (coptomber 11 re	, 2010)		
Hot r	olling			
159	Decoupling of effect of inter-roll thrust force on off-centering control based on differential force	K. Yamaguchi		651
160	Efficiency improvement activity in Keihin	T. Koyama		652
161	Examination of generation mechanism of Periodically changing telescope	T. Akashi		653
162	An study on reducing lateral bulging deformation in width direction during hot plate rolling	Y. Jung		654
163	Development of anti-grain coarsening low alloy steel for carburizing	W. Chiu		655
	amental tribological studies on manufacturing processes			
	Sticking in hot rolled sheet of ferritic stainless steel	Y. Matsubara		656
165	Development of air atomization supplying method in hot rolling process	T. Inoue		657
166	Curling of hot rolled sheet due to scale on steel surface	R. Aizawa		658
167		N. Oda		659
168	Evaluation of surface topology of rolled sheet by oils with different lubricity	Y. Okada		660
	Microstructure and Properties of Materials			
Lectu		Chaakar	г	2000
	2	Speaker	r	Page
	ling and simulation 1			
	Simulation of clustering process of solute atoms in BCC-Fe based on first principles calculation	M. Enoki	• • •	661
	First-principles calculations of solute atoms cluster of N and substitutional elements in α-Fe	T. Uesugi	• • •	662
	Fe-N potential using FS potential	K. Hyodo		663
172	Numerical analysis of internal stress in pearlite by molecular dynamics and its comparison with elastic theory	Y. Amemiya		664
Mode	ling and simulation 2			
173	Thermodynamic assessment and calculations of the Fe-Cr-C phase diagrams	K. Oikawa		665
174	Calculation of grain boundary segregation for boron and carbon based on thermodynamic analysis of the Fe-B-C ternary system	K. Takahashi		666
175	Prediction of microstructure development of DP steel by quantitative phase-field method	N. Kiyokane		667
176	Flow stress by inverse analysis with dynamic recovery and recrystallization model of duplex stainless steel	K. Kim		668
Plate	and machine structural steel

ISIJ and JIM Joint Sessions

	re No. Session Title	. Gome Coosione	Speaker		Pa	age
Titan	Titanium and its alloys 1					
J1	Synthesis of TiCl ₄ by low-temperature chlorination of TiN		E. Ahmadi			802
J2	2 Evaporation behavior of solute elements in Ti-alloy melt		H. Mizukami		•	803
J3	B Effect of reaction rate on state in upper space above bath surf production vessel	ace in actual sponge titanium	Y. Inoue			804
J4	4 Manufacturing of high quality titanium thin foil of A4 size by	electrodeposition route	Y. Nakajo		•	805
J5	5 Nanoscale analysis of cross-sectioned microstructure after ma Cu and Ni addition	achining in Ti531C alloy with	T. Furuhara			806
Titan	nium and its alloys 2					
J6	Rapid oxidation and nitriding of additive manufactured Ti-6Al-4	V alloy by induction heating in air	K. Tamura			807
J7	7 Comparison of pressformability in commercially pure titaniu interstitial free steel sheet	m JIS class1 sheet and	R. Miyoshi			808
J8	B Effect of interactions among grains on slip system activation	and its range in αTi	Y. Kawano		•	809
J9	P Effect of Al addition on tensile deformation property of Ti-18	Nb-xAl alloys	Y. Mantani		•	810
J10	Effect of V on mechanical properties and age-hardening beha	vior of Ti-Mn alloys	Y. Nakamura		•	811
Titan	nium and its alloys 3					
	Dependence of microstructure on creep behavior and deforma	ation mechanism in near-αTi alloy	H. Masuyama			812
J12	2 Constitutive plastic behavior, Dynamic globularization and malloy under hot forging process	nachine learning of the Ti-6246	H. Matsumoto			813
J13	3 Formation of silicide of high-temperature near-α Ti alloys		Y. Yamabe-Mitarai			814
Titan	nium and its alloys 4					
	4 Effect of interstitial elements on hot deformation behavior and	d microstructure evolution of				
	Ti-17 alloys		T. Tsukase	• •	•	815
	5 Dynamic precipitation of alpha phase during deformation in T	•	E. Chandiran		•	816
	6 Effect of hot multi-directional compression on dynamic recry	·	A. Ito	• •	•	817
J17	7 Relationship between microstructure and mechanical propert application and machine learning	ies of Ti-17 alloy for aerospace	D. Tadokoro			818
J18	B Deformation-static recrystallization behavior of Ti-5553 alloy	for aerospace application	M. Yoshimura	• •	•	819
Ultra	afine grained materials -fundamental aspects for ultra	fine grained structures- 1				
J19	Relationship between nanostructure and mechanical propertie	es of electrodeposited				
70.0	nanocrystalline nickel		T. Hayashi		•	820
	Effect of low temperature on deformation behaviors of Mg-0.1 at		K. Oki	• •	•	821
J21	Influence of ECAP processing and heat treatment on tensile p in ZK60A magnesium alloy	roperty and fatigue crack initiation	K. Umeda			822
Ultra	afine grained materials -fundamental aspects for ultra	fine grained structures- 2				
J22	2 Microstructure and mechanical properties of fine-grained Ti- from TiH ₂ mixed elemental powders	25Nb-25Zr alloy prepared	B. Sharma			823
J23	3 Microstructure and mechanical properties of harmonic struct entropy alloy	ure designed CrMnFeCoNi high	N. Togawa			824
J24	4 Peculiar mechanical properties and its mechanism of harmon	ic structured pure copper	M. Kawabata		•	825
Ultra	afine grained materials -fundamental aspects for ultra	fine grained structures- 3				
	Microstructure distribution through radius of pure aluminium ro		N. Kamikawa			826
	Effect of stacking fault energy on microstructural evolutions FCC metals processed by severe plastic deformation	•	M. Asano			827
J27	Nano-crystallization of quasi-stabilized austenitic stainless st	eels by dry ice particle peening	S. Minamimoto			828
	erials science of martensitic and bainitic transformatio Negative Poisson's ratio in single-crystal Cu-Al-Mn shape me		S. Xu			829
	Kinetic arrest of R-B19' transformation in Ti-(50-x)Ni-xFe sha		M. Todai			830
32)		pe memory unoy	10441			050

J30	Synchrotron radiation analysis on controlling mechanism of excellent strength and ductility in low carbon -2Si-5%Mn fresh martensitic steel	T. Fuse	 831
J31	Development of 1500MPa-30% high strength and high ductility 5% Mn ferrite+austenite steels and synchrotron radiation analysis on the mechanism to emerge the excellent mechanical properties	K. Minoda	 832
Mater	ials science of martensitic and bainitic transformations and its applications 2		
J32	Sensitivity coefficients of martensite microstructure to material parameters in steel	Y. Tsukada	 833
J33	Internal stress of hcp-martensite formed in Fe-Cr-Ni alloys	Y. Wada	 834
J34	Analysis of deformation behavior of martensite in a ultra-low carbon steel by crystal plasticity finite element method	S. Nambu	 835
J35	Segregation of boron to austenite grain boundary during cooling after high temperature austenitization	G. Miyamoto	 836
Mater	ials science of martensitic and bainitic transformations and its applications 3		
	Effect of thermo-mechanical control process on toughness of medium Mn martensitic steel	S. Okuhata	 837
	Martensitic transformation of high-entropy and medium-entropy alloys	H. Matsuda	 838
	Effect of the grain boundary a particle on martensite transformation behavior in Fe-Ni-Si alloys	K. Kitamura	 839
	Giant elastocaloric effect with wide temperature window in nanocrystalline Ti-44Ni-5Cu-1Al shape memory alloy	F. Xiao	 840
Mater	ials science of martensitic and bainitic transformations and its applications 4		
	Effects of peening direction on reverse transformation induced by shot-peening for Fe-Ni alloys	H. Sato	 841
	Effect of precipitates on dislocation-reducing rate in tempering treatment	S. Yoshida	 842
	The microstructure and mechanical properties of medium-Mn steels treated with interrupted	2	
	quenching and intercritical annealing	S. Tanaka	 843
J43	Analysis of carbide chemical composition of Si-added middle carbon tempered martensitic steels	T. Suzuki	 844
Mater	ials science of martensitic and bainitic transformations and its applications 5		
	Room temperature aging behavior of low-to-medium carbon low alloy ferrous lath martensite	N. Maruyama	 845
	In-situ heating TEM study of carbides in low-carbon martensite	Y. Fukuo	 846
	Alloying effects on low-temperature tempering behaviors of high-carbon martensite	Y. Zhang	 847
	Visualization of hydrogen release from lath martensite transformed from hydrogen-charged austenite	K. Oie	 848
Mater	ials science of martensitic and bainitic transformations and its applications 6		
	Effect of tensile stress on the kinetics of isothermal martensitic transformation	W. Mao	 849
	Effects of prior austenite grain size on microstructure of bainite and retained austenite in TRIP steel	M. Watanabe	 850
	Microstructure and local orientation relationship of lower bainite in carbon steels	T. Hayashi	 851
	•	,	
	ials science of martensitic and bainitic transformations and its applications 7	D 41 1 1:	0.50
	Invariant line analysis of experimental martensite orientation relationship	D. Akahoshi	 852
	Morphology and crystallography of martensite in equiatomic HfNi alloy	M. Matsuda	 853
	Microstructural analysis of lenticular martensites in Fe-Ni-C alloy based on Rank-1 connection	Y. Shinohara	 854
J54	Geometrical models and matrices for fine crystals at crossing hexagonal ε variants	T. Sawaguchi	 855
Mater	rials science of martensitic and bainitic transformations and its applications 8		
J55	Magnetic-field-induced martensitic transformation and its in situ observation in Fe–Mn–Ga		0.56
	shape memory alloys	X. Xu	 856
	In-situ measurement of surface relief induced by martensitic transformation	J. Inoue	 857
	Recrystallization texture control of Ti-4.5Al-3V-2Fe-2Mo alloy	H. Tobe	 858
J58	Characterisation of the martensite blocks in Fe-C low alloy lath martensite	S. Morito	 859
Physic	co-chemical properties of high temperature melts 1		
J59	Thermophysical property measurements of high temperature oxide melts using an electrostatic levitation furnace onboard the International Space Station - report 3	T. Ishikawa	 860
J60	Excess volume and partial molar volume of Ti-X(X=Cu, Ni) melts	M. Watanabe	 861
J61	Measurement of apparent thermal conductivity of mould flux containing iron oxide by parallel plate method	T. Yamauchi	 862
J62	Examination of sample diameter for thermophysical property measurement of solid sample using		0.75
	surface heating and surface detection laser flash method	K. Mori	 863

Physic	co-chemical properties of high temperature melts 2		
J63	Interfacial reaction and joining of Bi-Te materials against metallic substrates	S. Sukenaga	 864
J64	Wettability of Y ₂ O ₃ -SiO ₂ composites with different SiO ₂ activities against molten iron-based alloys	Z. Zhang	 865
J65	In-situ observation of the formation process of surface fine crevice structure by high-speed camera under laser-irradiation	J. Yeon	 866
J66	Measurement of speed of super-spread wetting on surface fine crevice structure by laser-irradiation	M. Nakamoto	 867
Physic	co-chemical properties of high temperature melts 3		
J67	Wide-range composition dependence of viscosity of molten SiO ₂ -Na ₂ O-NaF system	O. Takeda	 868
J68	Influence of dispersed bubbles on viscosity behavior of triple phases coexisting slag	Y. Egashira	 869
J69	Thermodynamic properties of Sm-O system for high coercivity magnet material development	R. Nakazawa	 870
J70	Assessment of Cu behavior between Cu-containing multi-component slag and matte using the reaction model and measurement of $\mathrm{Cu_2O}$ activity coefficient	S. Shin	 871
Physic	co-chemical properties of high temperature melts 4		
J71	Spontaneous colloidal metal cellular convection formation driven by molten salt electrolysis	S. Natsui	 872
J72	Thermal behavior of electrodeposited melt in molten salt electrolysis	R. Shibuya	 873
J73	Identification of solid phase in slag suspension by alternating current impedance method	Y. Takao	 874
Physic	co-chemical properties of high temperature melts 5		
J74	Proposal to determination method of density of oxide scale formed on steel	S. Shinohara	 875
J75	Crystal structure stability of Ca ₂ SiO ₄ -based solid solution predicted by Ab initio calculation	M. Suzuki	 876
J76	In-situ phase identification of crystal precipitated from molten CaO-SiO ₂ -P ₂ O ₅ -FeO slag	H. Serizawa	 877
